

ABSTRACT FOR “THE ENERGY EFFICIENCY DAYS 2009” TOURS / FRANCE

ENERGY MEASUREMENT GEARED FOR ENERGY SAVINGS

With the upcoming standardisation on Energy Measurement, based on the implementation of EN 50463, it will not only be important for Railway Operators to simply comply with this norm but more important to take advantage of the particularities of the related hardware in the area of Energy Saving and Fleet Management.

In a compact presentation FAR Systems SpA will be able to show how the elements of the new norm, transformed into adequate hard- and software, will play in favour of the interests of the Rolling Stock Operators.

We will be able to show, how each element of the UIC listing within Energy Management (as UIC graphics below) can be reached with functional Energy Metering.

The well known slogan of “What you cannot measure, you cannot fix” can be enlarged by saying “When you measure, you can manage and save!”
